

Daniel Inocencio

Software Developer

Iloilo City, Philippines | 09613231648 | danielnocencio11@gmail.com

Professional Summary

Software Developer with experience in web and mobile application development. Skilled in building responsive systems, developing user-focused applications, and implementing scalable solutions. Passionate about problem-solving and continuous learning.

Experience

- **Software Developer | SIEITZ** (Aug 2025 – Present)
Developed and maintained web and mobile applications while implementing key system features, backend integrations, and responsive UI improvements. Assisted in the end-to-end testing, debugging, and deployment stages to ensure high system stability and performance.
- **Mobile Developer Intern | The B Academy** (Feb 2025 – Mar 2025)
Assisted in developing cross-platform mobile applications, focusing on enhancing core functionality and optimizing the user experience for a seamless mobile interface.

Projects

- **Worka – HRMS**
 - **Purpose:** To streamline enterprise workforce management by providing automated tracking, real-time communication, and cross-platform task coordination.
 - **Tech Stack:** React.js, React Native, Node.js, Express, MongoDB, Socket.io, Firebase
 - **Description:** Developed core features for a multi-tenant workforce management system, including IP-based and Geofenced attendance tracking, employee portals, and task management with Kanban boards. Integrated real-time team chat and secure document handling to optimize organizational workflows.
- **Proventous – Career Platform**
 - **Purpose:** To simplify and automate the hiring, job matching, and employee onboarding lifecycle for businesses and job seekers.
 - **Tech Stack:** React.js, Node.js, Express, PostgreSQL, Tailwind CSS
 - **Description:** Contributed to building recruitment and onboarding workflows for a comprehensive career platform. Implemented job-matching logic and recruiter tracking pipelines to streamline talent acquisition.
- **T.H.R.I.B.O – Screening App**
 - **Purpose:** To provide a guided mobile tool for sensory screening to flag individuals who may need clinical medical consultations.
 - **Tech Stack:** React Native, SQLite, Local Storage
 - **Description:** Developed a cross-platform mobile sensory processing assessment application that evaluates six key sensory domains (touch, proprioception, vestibular, auditory, vision, taste/smell) through interactive tests. Engineered local database management and built an automated summary generator to instantly output screening results.
